OUR COMPREHENSIVE EYE PROTECTION RANGE OFFERS OUR CUSTOMERS THE LATEST STYLES along with the highest level of protection for wearers. Our entire range is compliant with AS/NZ 1337:1:2010.

BOOMERANG EYE PROTECTION	8
FRONTIER EYE PROTECTION	10-12
MACK EYE PROTECTION	13-15
BOLLÉ EYE PROTECTION	16-25
UVEX EYE PROTECTION	26-32

# EYE PROTECTION

EYE INJURY AND DAMAGE IS A REAL AND ALL TOO COMMON WORKPLACE RISK, PARTICULARLY IN INDUSTRIAL ENVIRONMENTS WHERE THE INSTANCE OF CHEMICAL SPLASH, FLYING DEBRIS, PROTRUDING OBJECTS OR WORKPLACE MISADVENTURE IS RELATIVELY HIGH.

Eye strain and ocular damage from ultraviolet (UV) radiation is also of significant concern, and as a result a minimum of 99% protection against harmful UV radiation should be worn.

Selection of 'fit for purpose' eyewear with the correct type of lens is based upon the employers' workplace assessment.

Our safety eyewear offering includes a comprehensive range of frame styles, lens shapes and coatings that mitigate risk and increase safety in most work application areas. All safety eyewear products we sell are manufactured and certified to the most recent Australian Standards AS/NZS 1337 and comply with all identity marking requirements.

OCCUPATIONAL HAZARDS		
Eye injuries, whatever the source, can result in anything from simple irritation to total blindness.		
HAZARD	TASK	
<b>MECHANICAL</b> Foreign objects (dust and solids), impact of flying fragment, solid particles	Chipping, drilling, grinding, riveting, crushing, woodworking, masonry & general dusty conditions	
<b>THERMAL</b> Hot Liquids splash, flame, extreme cold	Fire department & emergency services	
<b>OPTICAL RADIATION</b> Glare/Visible light	Working outdoors in bright sun & driving	
<b>OPTICAL RADIATION - UV</b> Ultraviolet, infrared, visible light, laser	Electric arc welding, gas welding, cutting, torch brazing	
<b>HEAT - IR</b> Hot sparks, molten, metal	Electric arc welding, furnace operations, pouring, casting	
<b>ELECTRICAL</b> Direct contact, electric arcs caused by short circuits	Working on power distribution plants & electrical work	
<b>CHEMICAL</b> Splash and irritating mists, acids, lyes	Acid and chemical handling, degreasing, plating, pouring & spraying	
<b>BIOLOGICAL</b> Bacteria, viruses and spores	Healthcare industry, labs & pandemic	

# EYE PROTECTION STANDARDS

The Australian Eye Protection Standard considers the risks of injury and provides guidelines to mitigate against them. Selecting the wrong type of safety glasses or goggles in handling the application hazard can have serious consequences. It is important to consider possible risks including velocity, size and the nature of the hazard when evaluating the right eyewear. The Standards for protective eyewear provides an excellent source of information and assistance.

## AS/NZS 1336:1997 RECOMMENDED PRACTICES FOR OCCUPATIONAL EYE PROTECTION

This Standard sets out recommended practices for the protection of the eyes of persons at work, against hazards such as flying particulates, dust, splashing materials and molten metals, harmful gases, vapours and aerosols, high-intensity radiation generated during welding operations and furnace work. Guidance is given on the selection of eye protectors appropriate to the use of particular lasers. Additional guidance is provided for manufacturers and dispensers of prescription lenses on the requirements for production of prescription personal eye protectors.

## AS/NZS 1337.1:2010 PERSONAL EYE PROTECTION – Eye and face protectors for occupational applications

\*PLEASE NOTE: This new Standard supersedes the previous Standard AS/NZS 1337:1992

This Standard specifies minimum requirements for non-prescription eye and face protectors and associated oculars. They are designed to provide protection for the eyes and faces of persons against common occupational hazards such as flying particles and fragments, dusts, splashing materials and molten metals, harmful gases, vapours and aerosols. Requirements for optical qualities and low, medium, high and very high impact resistance are given and appendices describing appropriate test methods are included in this Standard. Requirements for prescription-eye protectors against low and medium impact are given in AS/NZS 1337.6. Requirements for eye protectors against laser radiation are given in AS/NZS 1337, Parts 4 and 5.

The aim of this Standard is to assist in the provision of safe, efficient and comfortable vision in the occupational situation, including consideration of the need for protection against sun glare and optical radiation in the natural environment. The Standard does not apply to filter oculars for protection against optical radiations generated by industrial processes, which are dealt with in AS/NZS 1338.

## AS/NZS 1338.1:1992 FILTERS FOR EYE PROTECTORS

- Filters for protection against radiation generated in welding and allied operations

## AS/NZS 1338.2:1992 FILTERS FOR EYE PROTECTORS

- Filters for protection against ultraviolet radiation

## AS/NZS 1338.3:1992 FILTERS FOR EYE PROTECTORS

- Filters for protection against infra-red radiation

# IMPACT PROTECTION RATING

Impact protection is described as metres per second at which a particulate travels as described by Standard AS/NZS 1337.1:2010.

**LOW IMPACT** - Tested front on at 12m/sec

**MEDIUM IMPACT** - Tested front on, as well as side-on at 45m/sec

**HIGH IMPACT** - Tested front on, as well as side-on at 120m/sec

**VERY HIGH IMPACT** - Tested front on, as well as side-on at 190m/sec

# WAVELENGTHS AND UV LIGHT

We receive wavelengths through two organs; we see light through our eyes and we capture sound through our ears. From radio waves to gamma rays, wavelengths gradually constrict, causing their frequency to increase and making them consume more and more energy. Hence, waves gradually increase in intensity and therefore are more dangerous for the eyes.

The sun emits three types of light waves and without the correct eye protection each in its own way can seriously affect the eye.

## ULTRAVIOLET LIGHT RAYS:

5% of the sun's energy reaches the earth in this form. UV rays (invisible "tanning" rays) can cause serious damage to the unprotected eye including the development of cataracts and corneal blistering.

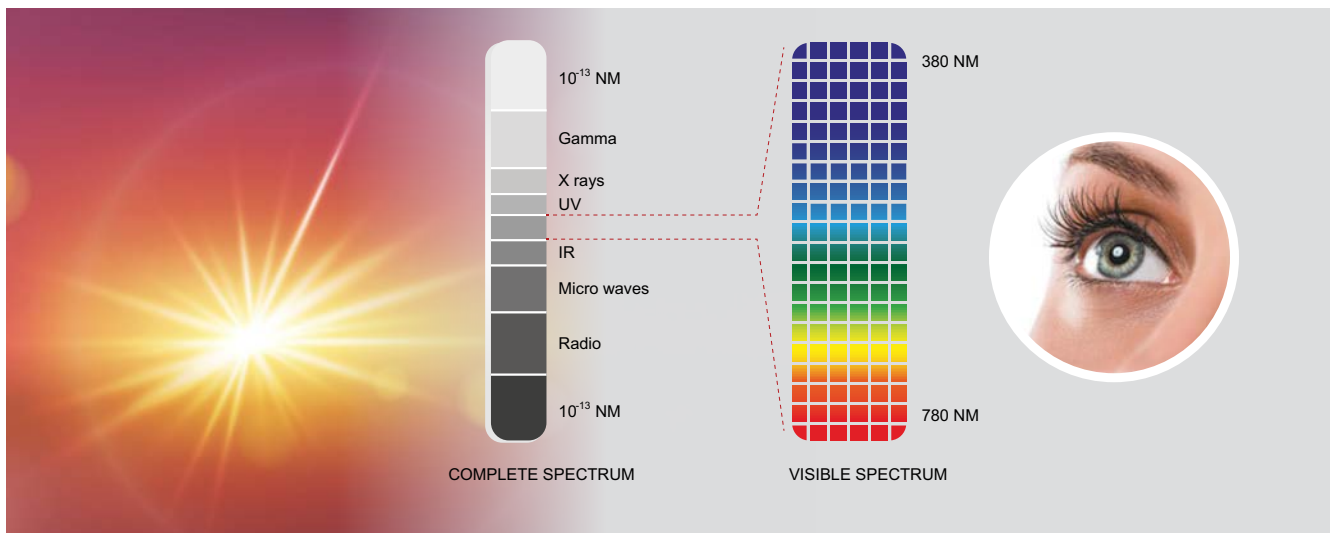

## INFRARED LIGHT RAYS:

50% of the sun's energy reaches the earth as heat or infrared. Some IR rays will be absorbed by the cornea creating a drying effect – an issue of importance to contact lens wearers.

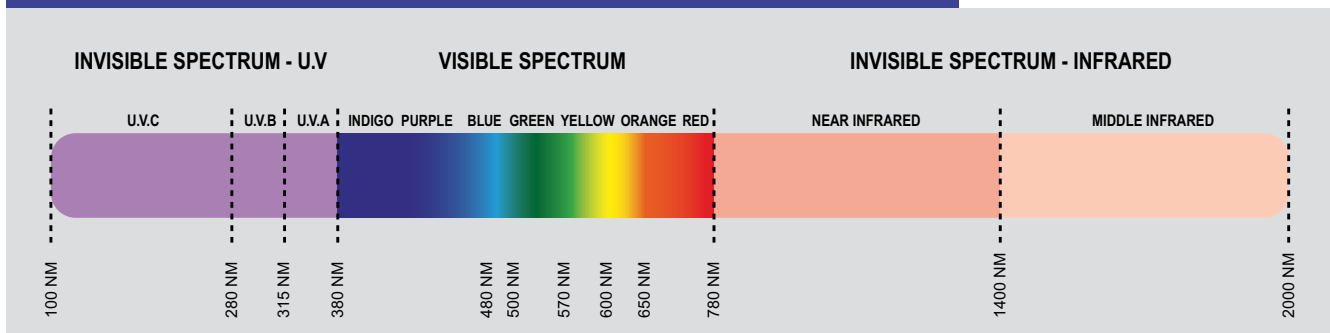

## VISIBLE LIGHT RAYS:

45% of the sun's energy reaches the earth in what the eye perceives as colour. Blue light waves are the most difficult to see. When the unprotected eye strains to focus on it, all other colours can be distorted. After two to three hours in bright sunlight, eyes can have trouble adjusting to night vision.

The human eye is not able to identify the various elements of a ray – it only sees the results, which are a function of the different wavelengths and their respective light intensity. The human eye can only see wavelengths within the "visible spectrum" (between 380 and 780 nanometres).

## CONSEQUENCES OF VISIBLE U.V AND I.R RADIATION ON THE EYE

	UVC 100 - 280 nm	UVB 280 - 315 nm	UVA 315-380 nm	BLUE LIGHT 380 - 480 nm	VISIBLE LIGHT 380 - 780 nm	NEAR IR 780 - 1400 nm	MIDDLE IR 1400 - 2000 nm
<b>CORNEA</b>	Conjunctivitis Partial blindness	Conjunctivitis Partial blindness	Conjunctivitis Partial blindness				
<b>LENS</b>	Conjunctivitis	Cataract Premature ageing	Cataract Premature ageing			Cataract	Conjunctivitis Partial blindness
<b>RETINA</b>	Conjunctivitis			Partial blindness Photoreinitis	Vision problems Discontinuous vision	Retinitis pigmentosa	

# LENS TYPES AND POLARISATION

POLARISED	
	<p><b>GREEN</b></p> <p>An injection moulded lens, grey/green in colour, providing the ultimate in 'comfort' vision, soothing the eyes against harsh glare and bright sun. It also provides excellent depth and colour perception.</p>
	<p><b>GREY</b></p> <p>An injection moulded lens, grey in colour, providing the ultimate in 'comfort' vision, soothing the eyes against harsh glare and bright sun. It also provides excellent depth and colour perception.</p>

LENS SHADES	
	<p><b>CLEAR</b></p> <p>Approved for use indoors.</p>
	<p><b>AMBER</b></p> <p>A high definition lens designed for use in low light situations. Approved for use indoors.</p>
	<p><b>SMOKE</b></p> <p>Excellent protection against damaging UV rays and glare.</p>
	<p><b>BROWN</b></p> <p>A neutral density brown lens that provides true colour definition by fighting glare and enhancing colour contrast.</p>

MIRROR (FLASH) SHADES	
	<p><b>SMOKE/SILVER MIRROR 14%</b></p> <p>Ideal for everyday, all purpose outdoor wear. Neutral density grey lens with metallic silver mirror finish designed to reflect harmful solar rays before they enter the lens. Provides true colour definition.</p>
	<p><b>LIGHT SMOKE/SILVER MIRROR 29%</b></p> <p>For everyday, all purpose outdoor wear. Medium tint clear lens. Silver metallic finish.</p>
	<p><b>BLUE MIRROR 15%</b></p> <p>Ideal for everyday, all purpose outdoor wear. Neutral density blue lens with metallic silver mirror finish designed to reflect harmful solar rays before they enter the lens. Provides true colour definition.</p>

# EYEWEAR MARKINGS

AS/NZS MARKINGS	DEFINITION
<b>I</b>	Medium impact
<b>C</b>	Splashproof
<b>D</b>	Dustproof
<b>G</b>	Gastight
<b>H</b>	High temperature
<b>O</b>	Outdoor use, untinted

Any certified safety eyewear product sold in Australia must carry markings either etched or impressed into the frame and lenses indicating the relevant approval. For a single lens product (like a goggle or eye shield) the markings need only appear once. On a dual lens spectacle, the markings must be on each lens.

# OCULAR CATEGORIES

CATEGORY	LENS
<b>0</b>	Clear/Lenses
<b>1</b>	Limited sun glare reduction and UV protection. Not suitable for driving at night. Visible light transmittance of 43% - 80%
<b>2</b>	Sun glare reduction and good UV protection. Visible light transmittance of 18% - 43%
<b>3</b>	High sun glare protection and good UV protection. Visible light transmittance of 8% - 18%

**Photo-Chromatic** Lens adapts to the UV light intensity, darkening automatically in sunlight, then fading back indoors. Lens colours will shift the ocular category between 0 - 3.

# FITTING & MAINTENANCE TIPS

✓ Protective eyewear should completely cover the wearer's eyes, without lateral gaps.

✓ Damaged eyewear should be replaced immediately.

✓ Nose pads, if available, should be properly adjusted to ensure a snug, comfortable fit.

✓ Eyewear should be cleaned regularly with lens cleaner. Some cleaning products can remove lens coating e.g. anti-fog.

✓ Temple arms, if available, should be adjusted to a length appropriate to the wearer.

✓ Eyewear should be stored correctly to prevent scratches and other damage.

## BOOMERANG

## THE BRAND BEHIND BOOMERANG

The Boomerang® range of workwear and personal protective equipment is proudly designed and manufactured in partnership with Cole Workwear Pty Ltd - a Noongar owned and operated Indigenous Australian company and Supply Nation certified business.

The Boomerang brand is synonymous with high quality materials and design, suited to Australian conditions.

The distinctive and unique Boomerang® logo, featuring four 'kylees' or boomerangs, owes its origins to the founder of Cole Workwear's four children and represents the significant link to the Noongar people and the land. The swirls within each boomerang also illustrate the nation's waterways which hold real significance to all First Nation peoples.

The 'kylees' or boomerangs within the brand also represent diversity and ingenuity, something the Boomerang® brand always aspires to deliver.
