AVOID PALLET RACK DISASTERS

Pallet Rack Inspections By Qualified Inspectors

As well as Lifting Equipment Inspections, our Field Testing Officers can now undertake pallet racking inspections to Australian Standard AS 4084:2012.

To comply with WH&S laws, it is vital to have your racking inspected by a qualified person at least **every 12 months**. Often damage to racking may not be obvious or can be hidden from the untrained eye.

Our experienced inspectors can undertake thorough checks and provide a report detailing any damage and recommended actions to ensure you comply with **Australian Standards**.

Reports are both emailed to you and kept in our Asset Database Register for future reference.
