FIELD ID LIFTING ASSETS

Field ID is the world's leading paperless safety compliance and equipment inspection system. The system web-based technologies with the power of mobile devices to improve the efficiency, reliability and reporting of workplace safety management. Robertsons Inspectors use Field ID to improve the accuracy of equipment inspections and enable you to access and manage your assets easily.

The Lifting & Height Safety Asset Management Cycle

SAFETY MADE SIMPLE

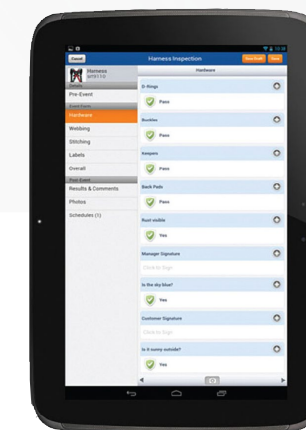

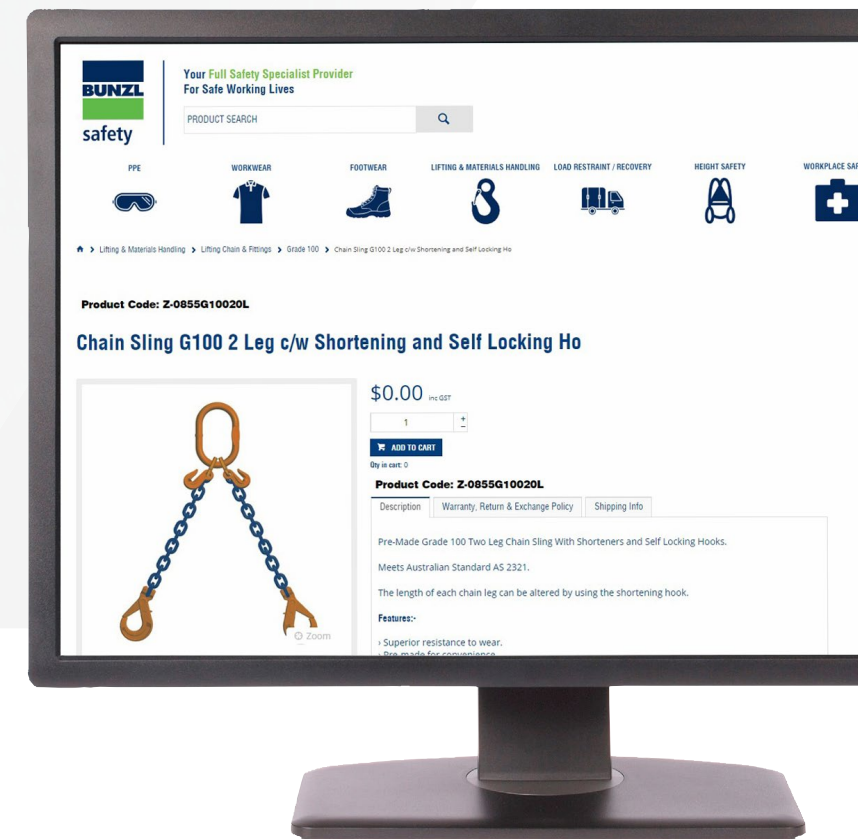

Being a fully compatible electronic system, Field ID makes equipment compliance and keeping track of your lifting and rigging assets simple.

Field ID

- ✓ Increases workplace safety
- ✓ Increases inspection and audit efficiency, reducing your liability
- ✓ and in turn, saves you money.

By eliminating inspection and audit paperwork our LEEA trained inspectors will conduct inspections and audits faster and more securely (using iPad's) and upload your reports almost instantly.

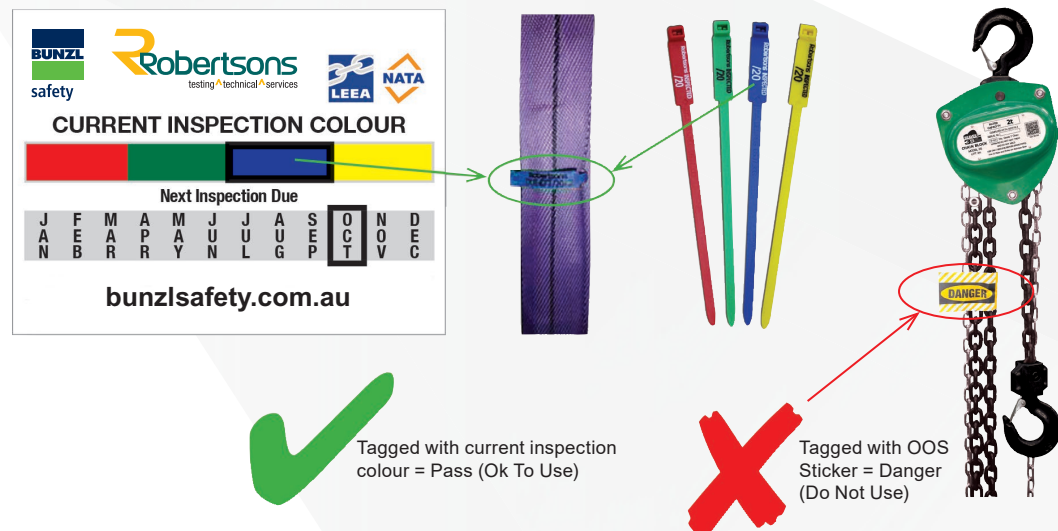

This enables you to access reports, certificates and your asset management database through the easy to use and navigate, Field ID Asset Management System - either from your PC or your own smart technology devices.

CHOOSE YOUR SAFETY TAG SYSTEM OPTION

Option 1: The RGBY System

In line with standard mining and construction procedures, the colour coded RGBY (Red, Green, Blue, Yellow) maintenance system allows for easy referencing and safety procedures. The RGBY system is commonly used for quarterly inspections. Each tag contains the most recent inspection date, and the colour should correlate with the quarterly colour indicated on the inspection board. A yellow 'Out Of Service' sticker is placed on any equipment which has failed the inspection.

Option 2: The Traditional Tag System

FIELD ID CAPABILITIES

Scheduling Functionality

Utilising the Field ID system, we can effectively managed the entire inspection scheduling process so you don't have to worry. If you wish to track when an inspection or audit is due, the information is easily available in an extremely user-friendly format.

The screenshot shows the Field ID system interface. At the top, there are logos for BUNZL safety and Robertson's. Below the logos, there is a navigation bar with links like 'New Asset', 'Start Event', 'Search', 'Reporting', and 'Setup'. A search bar is also present. The main content area displays a table of inspection events. The table has columns for 'Customer Name', 'ID Number', 'Asset Type', 'Asset Status', 'Location', 'Date Identified', 'Last Event Date', and 'Next Scheduled Date'. The 'Next Scheduled Date' column is highlighted with a red circle. Below the table, there are links for 'Email' and 'Save'.

Customer Name	ID Number	Asset Type	Asset Status	Location	Date Identified	Last Event Date	Next Scheduled Date	Actions

Full Asset Management

Field ID offers simplified organisation and access to your lifting and height safety assets. There are multiple data and filtering functions which makes finding detailed information about particular assets easy.

GPS Capabilities

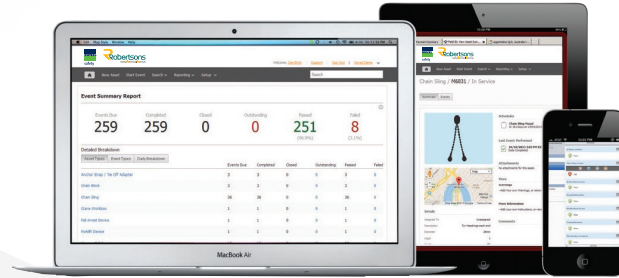

With Field ID's GPS capabilities, you can see exactly when and where an inspection or audit was performed. This information is also stored for future reference.

Detailed Asset Information Screen

EASILY ACCESS & SHARE REPORTS

Field ID puts all your inspections and audits in the one place, enabling you to access your safety data in real time - 24 hours a day, 7 days a week. Customers can also access and share asset reports and information from their own iPad or iPhone. Suddenly, safety success is not only possible, it's simple and easy!

Reporting

Field ID's various reports assist customers with the sometimes arduous task of remaining compliant with safety regulations. The simplified search and reporting functions of the system also help you to gain insight into maintaining the safest workplace.

Visual Inspection Reports, which show whether individual items have passed or failed on a specific date can be easily downloaded in PDF format.

Full summaries of an inspection can also be viewed in the Event Summary Report.

ACCESSING YOUR ASSET REPORTS & INFORMATION

Asset Summaries

An Asset Summary Report enables you to conveniently view a summary of all your equipment to determine if these assets are being inspected and maintained in a safe and serviceable condition.

Hand information such as the product description and manufacturer, as well as the date of result of any inspection performed, are available on the one screen.
